Micro II · 考古 Review

Past exams (years 07–11) and the course answers (器官 / 診斷 / 描述) for the 18 slides on the B12 Micro II list that appeared in past exams.
Sources: B10 official answers & grading · B11 full-marks student sheet · senior's annotated exam list (years 07–09, topics only).

1 · How often each diagnosis was tested

Cell = organ used that year · 牙 dentistry students only · 碩 master's program only · 補考 make-up exam only · “Micro III card” = on the B12 list under Micro III

Diagnosis	11	10	09	08	07	Total
Squamous cell carcinoma	Skin	Uterine cervix		Esophagus	Esophagus	4
Adenocarcinoma	Large intestine	Large intestine / colon	Colon			3
Amyloidosis / amyloidoma	Salivary gland (written as soft tissue)		Lung		Lung or heart (both highlighted)	3
Atherosclerosis		Artery	Artery		Artery	3
Nephroblastoma (Wilms tumor)	Kidney	Kidney			Kidney	3
Adenocarcinoma, signet-ring cell type (signet-ring cell carcinoma)	Stomach	Stomach				2
Mature (cystic) teratoma		Ovary 牙 補考			Ovary	2
Schwannoma	Soft tissue		Soft tissue			2
Warthin tumor Micro III card			Parotid gland		Parotid gland	2
Cardiac myxoma				Heart (left atrium), 68F		1
Desmoid-type fibromatosis Not in B12 list				Soft tissue (abdominal wall) Not in B12 list		1
Hyaline membrane disease				Lung		1
Myxoid liposarcoma Not in B12 list				Soft tissue (thigh) Not in B12 list		1
Nasopharyngeal carcinoma		Nasopharynx 補考				1
Neuroblastoma			Adrenal gland			1
Neurofibroma, plexiform and diffuse type		Skin				1
Pleomorphic adenoma (mixed tumor) Micro III card				Parotid gland		1
Retinoblastoma		Eye 補考				1
Small cell carcinoma Micro III card		Lung 碩				1

Papers by year

Year 11 · B11 114-1 Micro 2 — a student's answer sheet (101/102; each question organ 2 + diagnosis 5 + description 10)		
1	Salivary gland (written as soft tissue)	Amyloidosis
2	Stomach	Adenocarcinoma, diffuse type (signet-ring cell)
3	Large intestine	Adenocarcinoma
4	Kidney	Wilms tumor
5	Soft tissue	Schwannoma
6	Skin	Squamous cell carcinoma

Year 10 · B10 第二次 micro — official answers & grading criteria		
1	Skin	Neurofibroma
2	Stomach	Adenocarcinoma, diffuse type / signet-ring cell carcinoma
3	Large intestine / colon	Adenocarcinoma
4	Uterine cervix	Squamous cell carcinoma
5	Artery	Atherosclerosis
6	Kidney	Wilms tumor (nephroblastoma)
5	Ovary	Mature (cystic) teratoma 牙
6	Lung	Small cell carcinoma 碩 Micro III card
補考 1	Uterine cervix	Squamous cell carcinoma 補考
補考 2	Ovary	Mature teratoma 補考
補考 3	Stomach	Adenocarcinoma, diffuse type 補考
補考 4	Skin	Neurofibroma 補考
補考 5	Eye	Retinoblastoma 補考
補考 6	Nasopharynx	Nasopharyngeal carcinoma 補考

Year 09 · Senior's annotated exam list (授袍禮物) — topics only, no answers		
	Lung	Amyloidosis
	Adrenal gland	Neuroblastoma
	Colon	Adenocarcinoma
	Parotid gland	Warthin tumor Micro III card
	Soft tissue	Schwannoma
	Artery	Atherosclerosis

Year 08 · Senior's annotated exam list (授袍禮物) — topics only, no answers		
	Lung	Hyaline membrane disease
	Esophagus	Squamous cell carcinoma
	Parotid gland	Pleomorphic adenoma (mixed tumor) Micro III card
	Soft tissue (abdominal wall)	Desmoid-type fibromatosis Not in B12 list
	Soft tissue (thigh)	Myxoid liposarcoma Not in B12 list
	Heart (left atrium), 68F	Cardiac myxoma

Year 07 · Senior's annotated exam list (授袍禮物) — topics only, possibly incomplete		
	Lung or heart (both highlighted)	Amyloidosis
	Kidney	Wilms tumor
	Esophagus	Squamous cell carcinoma
	Parotid gland	Warthin tumor Micro III card
	Ovary	Mature cystic teratoma
	Artery	Atherosclerosis

2 · Answers for the 18 tested slides (course format)

Immunological disorder

PA0030 (25) · Amyloidoma (amyloidosis) · Lung | 考古: 11 · Salivary gland; 09 · Lung; 07 · Lung or heart

器官 (Organ)	Lung
診斷 (Diagnosis)	**Amyloidoma (or Amyloidosis)**
描述 (Description)	1. Amorphous, eosinophilic, hyaline extracellular deposits with cracking artifacts 2. Other finding: lymphocytes & multinucleated giant cells (like a foreign-body reaction)

Disease of infancy and childhood

PA0289 (68) · Nephroblastoma (Wilms tumor) · Kidney | 考古: 11 · Kidney; 10 · Kidney; 07 · Kidney

器官 (Organ)	Kidney
診斷 (Diagnosis)	**Nephroblastoma (or Wilms tumor)**
描述 (Description)	1. Triphasic pattern: (1) blastemal component — sheets of small round blue cells; (2) epithelial component — epithelial cells forming tubular, glomerular or papillary structures 2. Stromal component: spindle cells in a fibromyxoid background (may have heterologous elements — not on this slide) 3. Anaplasia (not on this slide) 4. Necrosis 5. Hemorrhage

PA0305 (107) · Neuroblastoma · Adrenal gland | 考古: 09 · Adrenal gland

器官 (Organ)	Adrenal gland
診斷 (Diagnosis)	**Neuroblastoma ("poorly differentiated" optional)**
描述 (Description)	1. Circumscribed tumor at the adrenal medulla (border & location) 2. Nests and sheets of neuroblasts: small, round to oval cells with salt-and-pepper chromatin, scant / indiscernible cytoplasm (high N:C ratio) and vague cytoplasmic borders (arrangement & cells) 3. Eosinophilic fibrillary material (neuropil) in the background (thin septa of S100+ schwannian stroma are hard to see — optional) 4. Homer-Wright (pseudo) rosettes (arrangement) 5. Extensive hemorrhage (background) 6. Focal calcification (background)

PA0247 (142) · Retinoblastoma · Eye | 考古: 10 · Eye 補考

器官 (Organ)	Eye
診斷 (Diagnosis)	**Retinoblastoma**
描述 (Description)	1. Small round blue cells arising from the retina (growing into the vitreous cavity without choroidal invasion — for staging) 2. Flexner-Wintersteiner rosettes (rosettes of tumor cells surrounding a central lumen) 3. Fleurettes (photoreceptor differentiation) 4. Necrosis

PA0200 (146) · Hyaline membrane disease · Lung (neonatal) | 考古: 08 · Lung

器官 (Organ)	Lung (neonatal)
診斷 (Diagnosis)	**Hyaline membrane disease**
描述 (Description)	1. Variable atelectasis and dilation of alveoli with edematous, thickened alveolar septa 2. Hyaline membrane lining alveolar space: homogeneous eosinophilic linear material closely adherent to the alveolar surface 3. May hemorrhage

Epithelial tumor

PA0047 (32) · Squamous cell carcinoma · Esophagus | 考古: 11 · Skin; 08 · Esophagus; 07 · Esophagus

器官 (Organ)	Esophagus
診斷 (Diagnosis)	**Squamous cell carcinoma**
描述 (Description)	1. The tumor cells have pleomorphic hyperchromatic nuclei and prominent nucleoli, arranged in solid sheets & nests (cells & arrangement) 2. The tumor cells are polygonal, with abundant eosinophilic cytoplasm, keratinization and intercellular bridges (differentiation) 3. Invasion to the lamina propria, muscularis mucosae & submucosa (extent of invasion) 4. Desmoplastic stromal reaction (affected background) 5. Squamous dysplasia also present (precursor in the background)

PA0102 (83) · Squamous cell carcinoma · Uterine cervix | 考古: 11 · Skin; 10 · Uterine cervix

器官 (Organ)	Uterine cervix
診斷 (Diagnosis)	**Squamous cell carcinoma**
描述 (Description)	1. Infiltrative, angulated, irregular solid nests of tumor cells with stromal desmoplasia (border, arrangement, background) 2. Tumor cells show pleomorphic hyperchromatic nuclei, increased mitosis, and squamous differentiation: polygonal shape, abundant eosinophilic cytoplasm, keratinization and intercellular bridges (cells, differentiation) 3. Other finding: acute and chronic inflammation with multinucleated giant cells (bystander, not always present)

PA0260 (190) · Nasopharyngeal carcinoma · Nasopharynx | 考古: 11 Micro III · Nasopharynx; 10 · Nasopharynx 補考

器官 (Organ)	Nasopharynx
診斷 (Diagnosis)	**Nasopharyngeal carcinoma (NPC)**
描述 (Description)	1. Infiltrative growth 2. Sheets of tumor cells mixed with abundant lymphocytes 3. Tumor cells: (1) oval nuclei, prominent nucleoli, vesicular chromatin; (2) indistinct cell borders imparting a syncytial appearance

PA0249 (38) · Adenocarcinoma · Colon | 考古: 11 · Large intestine; 10 · Large intestine / colon; 09 · Colon

器官 (Organ)	Colon OR large intestine
診斷 (Diagnosis)	**Adenocarcinoma**
描述 (Description)	1. Atypical tall columnar cells arranged in a complex glandular pattern 2. Nuclear hyperchromasia, elongation, and stratification 3. Prominent nucleoli 4. Stromal desmoplasia 5. Dirty necrosis 6. Stromal invasion (to the lamina propria, muscularis mucosae, submucosa and muscularis propria)

PA0279 (33) · Adenocarcinoma, signet-ring cell type (signet-ring cell carcinoma) · Stomach (with duodenal involvement) | 考古: 11 · Stomach; 10 · Stomach; 09 Micro III · Stomach; 08 Micro III · Stomach

器官 (Organ)	Stomach (with duodenal involvement)
診斷 (Diagnosis)	**Adenocarcinoma, diffuse/signet-ring cell type (signet-ring cell carcinoma)**
描述 (Description)	1. Infiltrative growth, stromal invasion (deep into the muscularis propria) 2. Small clusters or single discohesive cells with signet-ring features (voluminous intracellular mucin + pushed-aside nuclei) 3. Mild cytologic atypia: nuclear hyperchromasia 4. Stromal desmoplasia

PA0055 (36) · Neuroendocrine tumor (carcinoid tumor) · Small intestine (ileum) | 考古: 11 Micro III · Small intestine (duodenum) / pancreas & duodenum; 10 Micro III · Pancreas; 09 Micro III · Small intestine; 07 Micro III · Small intestine

器官 (Organ)	Small intestine
診斷 (Diagnosis)	**Neuroendocrine tumor**
描述 (Description)	1. Infiltrative growth, stromal invasion (deep into the subserosa) 2. Uniform cells with pink cytoplasm, round to oval nuclei, "salt and pepper" chromatin 3. Islands, nests, trabeculae, glands

Non-epithelial tumor

PA0158 (135) · Schwannoma · Soft tissue (near T-level vertebra) | 考古: 11 · Soft tissue; 09 · Soft tissue

器官 (Organ)	Soft tissue
診斷 (Diagnosis)	**Schwannoma**
描述 (Description)	1. Well-circumscribed / encapsulated tumor 2. Uniform spindle cells with wavy nuclei 3. Hypercellular (compact) areas with intersecting fascicles and whorling of spindle cells and nuclear palisading, forming Verocay bodies (Antoni A) 4. Hypocellular areas with myxoid stroma (Antoni B) 5. May have hyalinized vessels 6. May have lymphoid aggregates at the periphery 7. May have degenerative changes: scattered bizarre nuclei, cystic change, xanthomatous change

PA0195 (134) · Neurofibroma, plexiform and diffuse type · Soft tissue (cheek) | 考古: 10 · Skin

器官 (Organ)	Soft tissue
診斷 (Diagnosis)	**Neurofibroma, plexiform and diffuse type (the type — localized / plexiform / diffuse — must be written in the diagnosis or description)**
描述 (Description)	1. Infiltrative (diffuse type) or multinodular growth / bag-of-worms appearance (plexiform type) 2. Bland spindle cells with wavy, tapering nuclei 3. Myxoid to collagenous stroma 4. Shredded-carrot-like collagen fibers 5. No cytologic atypia 6. May have entrapped nerves 7. May have mast cell infiltration

PA0100 (81) · Malignant melanoma · Skin (vulva) | 考古: 10 Micro III · Lung

器官 (Organ)	Skin
診斷 (Diagnosis)	**Melanoma**
描述 (Description)	1. Infiltrative tumor involving the epidermis and dermis 2. Highly cellular tumor composed of irregular nests or single cells with enlarged pleomorphic nuclei, prominent nucleoli, and melanin pigments 3. High mitotic activity 4. Brisk tumor-infiltrating lymphocytes

PA0285 (88) · Mature (cystic) teratoma · Ovary | 考古: 10 · Ovary 牙, 補考; 07 · Ovary

器官 (Organ)	Ovary
診斷 (Diagnosis)	**Mature teratoma**
描述 (Description)	1. Cystic tumor composed of mature tissue from different germ layers, including squamous epithelium, skin adnexa, glial tissue, nerves, adipose tissue, bone, cartilage, respiratory epithelium, and choroid plexus (in the exam, list the tissues you actually see on the slide)

Cardiovascular diseases

PA0002 (5) · Cardiac myxoma · Heart (left atrium) | 考古: 08 · Heart (left atrium), 68F

器官 (Organ)	Heart (no need to name the chamber)
診斷 (Diagnosis)	**Cardiac myxoma or Myxoma**
描述 (Description)	1. Well-circumscribed tumor 2. Bland spindle or stellate cells with oval nuclei arranged singly or in cords and rings 3. Myxoid stroma 4. Abundant vessels 5. Hemorrhage and hemosiderin

PA0170 (2) · Atherosclerosis · Artery (carotid) | 考古: 10 · Artery; 09 · Artery; 07 · Artery

器官 (Organ)	Artery (no need to name which artery)
診斷 (Diagnosis)	**Atherosclerosis**
描述 (Description)	1. Fibrous cap with smooth muscle cells and collagen 2. Necrotic core with cholesterol clefts and foam cells 3. Macrophages and lymphocytes

PA0171 (3) · Amyloidosis · Heart (myocardium) | 考古: 11 · Salivary gland; 07 · Lung or heart

器官 (Organ)	Heart
診斷 (Diagnosis)	**Amyloidosis**
描述 (Description)	1. Amorphous, eosinophilic, hyaline extracellular deposits 2. Deposition patterns: myocardial interstitial (pericellular / nodular); vascular / microvascular; also deposits in the endocardium and epicardium
